

## **IN THE SPECIFICATION:**

At page 1, the paragraph beginning at line 23 is amended as follows:

When the account statement of a specific customer group should be printed out, the document template and the variable data are merged in a data processing device, and from this a print job is generated. The print job thus comprises variable data, such as for example the cited customer names and account numbers, and ~~consistent~~ unchanging elements, such as for example fonts or standard texts. Such ~~consistent~~ unchanging elements are typically called static resource data.
